Work Experience

IKM Digital

Flutter Mobile Developer

Apr 2024 – Present, England – UK (Remote)

- Ability to understand **Figma designs** and download appropriate asset formats.
- Developed Flutter applications following **Architecture** and **Design Patterns**, such as **Clean Architecture**, **SOLID**, and **TDD**, and **Dependency-injection** principles.
- Implemented separate service classes injected as dependencies with **get_it** to be reusable across different features.
- Implemented **state management** solutions such as **Provider** and **Bloc**.
- Integrated **RESTful APIs** via **HTTP** package and **BaaS** client libraries (**Firebase** and **Supabase**).
- Created unit and integration tests for Dart helper methods and services classes with **mocktail** and **Flutter test**.
- Experienced in using **Coding Agents** through **Cursor** and **VS code**, and developed **Dart packages** that automate creating Clean Architecture folder structure and **go-router** routes.
- Used **python** to filter datasets and normalize the text to make the data more user-friendly.

Major Refactors

- Refactored Spoon app using clean architecture, migrated from Firebase to **Supabase**, and transferred user data **via PSQL and Python3**.
- Built Dart packages to automate Flutter boilerplate generation and integrated AI coding agents into the workflow.

Volunteer experience

- **University of Khartoum – Medical Lab Sciences:**
 - Developed a full-stack web app using HTML, JS, Bootstraps and Flask to build a Question Bank for Biochemistry.

Languages

- **Primary: Arabic**
- **Secondary: English – IELTS Academic Overall Band Score 7.5**

Projects

Edupay

Futter Front-end Engineer

Aug 2025 – Oct 2025, Abu Dhabi

- Worked as a front-end engineer, **collaborated** with a back-end developer, and applied **Clean Architecture** principles to a Flutter Android application that facilitates payment of education fees for parents and students.
- Created **60+ screens** and **150+ UI elements**, applying industry-standard Flutter packages to ensure consistent and appropriately sized layouts.
- Used **go-router** for app routing and provider for state management.

Spoon: Smart Calorie Tracker

Futter Front-end, BaaS Developer

Apr 2024 – Apr 2025, Abu Dhabi

- Developed a Flutter Mobile and Web Application, and integrated Gemini API for images classification and Firebase as a bass.
- Users can log meals quickly using their rear cameras; the application has **100+ downloads** on Google Play.
- Normalized various food datasets using **Python, Pandas**, and the **Gemini API** to create an **SQLite database** containing **6,000+ Shariah-compliant food items** for future manual ingredient logging.
- Delivered transactional emails via **Supabase Edge Functions, Resend, and GitHub Actions** for account deletion lifecycle notifications.

Nass – Arabic Creative Writing

Play Store and App Store DevOps

March 2026 – April 2024, Abu Dhabi

- Integrated **Apple** and **Google authentication** into an **Ionic Vite** application leveraging **React**.
- Published the app on **Play Store** and **App Store**.
- Maintained version control for discrete iOS and android branches in a single **Github** codebase.

Certification

- **CS50's Harvard Introduction to Computer Science.**
 - Completed Harvard's **CS50**, gaining proficiency in **Python, JavaScript**, and **SQL**.
 - Applied core CS concepts including **data structures, algorithm analysis**, and **database management** using **SQLite3** and Python.
 - Built a full-stack question bank web app enabling biomedical students to practice exam questions, using Flask, JavaScript, Bootstrap, HTML, and SQLite3.
- **IELTS Academic Overall Band Score 7.5**
 - Listening: **8.5**
 - Reading: **7.5**
 - Writing: **7.0**
 - Speaking: **7.5**
 - Overall band score: **7.5**

Skills

- **Programming:**
 - Dart, Flutter, SQLite3, Python3, Typescript, React, Ionic, Vite, JavaScript, HTML/CSS, Flask, Bootstrap, Data Normalization, Supabase databases, Firebase Firestore, Firebase Authentication, Supabase Authentication, Gemini, API integration, dartz, provider, bloc, dependency injection, git_in, responsive layouts, continue, git, GitHub, GitHub actions, Agentic coding, factory pattern, SOLID principles, clean architecture (FCL), Exception-Failure pattern
- **Tools:**
 - Android Studio, Vs Codium, Git, Firebase, Supabase, Continue, Cursor, Claude Code, Google Antigravity.
